Dear Smadex Team,

I'm writing to express my interest in the Junior Backend Engineer position at Smadex. With experience in backend development and a background in digital marketing, I bring both technical skills and a strong understanding of how technology supports real business needs.

In my current role, I'm working with technologies like Python, Django, FastAPI, PostgreSQL, Redis, Celery, and Docker - building APIs, managing async workflows, and deploying containerized applications. I've also set up CI/CD pipelines and worked with real-time data integrations. In parallel, I'm actively expanding my skills in the field of AI automation — learning how to build agents using LangChain and vector databases to automate repetitive tasks and build smarter tools.

What sets me apart is my ability to communicate clearly and effectively - both with technical and non-technical teams. Coming from a marketing background, I've led cross-functional projects and understand the importance of delivering value. I'm confident I can quickly become a reliable part of any engineering team, both technically and in terms of collaboration.

While I may not know everything yet, I learn fast and I'm genuinely excited to grow in a high-load, real-time environment like Smadex. If there are any knowledge gaps, I'd be more than happy to close them as quickly as needed.

Thank you for considering my application. I'd love the opportunity to contribute to your team and would be happy to chat further at your convenience.

Best regards,

Volodymyr Teslenko
